Getting started

“TAOXINLVU TREES PEOPLE Principles of Civilization Power” makes the human world more peaceful, prosperous and wonderful

Dedicated this article to those who are compassionate and caring for the earth and truly care for the better future of mankind.

The major contradictions exist in human society are caused by five types of people:

The first type is large number of fools that widely exist in the society who lack wisdom.

The second type is large number of thugs that widely exist in the society who lack virtue.

The third type is large number of the poor that widely exist in the society who lack money.

The fourth type is large number of the rich that widely exist in the society who lack reputation.

The fifth type is large number of powerful people that widely exist in the society who lack position.

These five types of people are the source of all the contradictions and conflicts in human society.

The contradictions caused among these five types of people are the major stumbling block (a tiger standing in the way) to

the peaceful and harmonious development of society in every country. The human society can only digest these contradictions by continuously fulfilling the wishes of these five types of people. Only by completely resolving these contradictions and conflicts can social productivity and production relations, economic foundation and higher structure, the earth's ecological environment and resources and the ecological environment of human society to achieve a good interaction, achieve a win-win situation between the universe and the world, every species in the universe can truly form a virtuous circle of development and to realize mutual prosperity, stability and sublimation of mutual civilization and ultimately to realize the social rotation of sublime life.

If the human society wants to realize this sacred ideal, it has to adopt “TAOXINLVU TREES PEOPLE Principles of Civilization Power”. It can perfectly fulfil the wishes of these five types of people. And only “TAOXINLVU TREES PEOPLE Principles of Civilization Power” can easily achieve the goals and wishes that human beings have dreamed of achieving but failed to achieve for thousands of years.

“TAOXINLVU TREES PEOPLE Principles of Civilization Power” comprises the wisdom key password of Emerald Tablet in ancient times; comprises the excellent techniques and methods of alchemy in ancient times; comprises the circular natural resources of the Stone of the Philosophers in ancient times.....

“TAOXINLVU TREES PEOPLE Principles of Civilization Power” can reveal the magic of turning stone into gold and making

something out of nothing; it can heal every aspects of social problems. It possesses the powerful force of bringing the dying society back to life again. It can easily solve and cure the major contradictions among the five types of social members that have long been existing in the society.

By achieving these goals, "TAOXINLVU TREES PEOPLE Principles of Civilization Power" will not advocate the use of war, violence, struggle, coercion, or tax and fee increases. It will not kill the rich to help the poor, will not praise the poor and suppress the rich, will not advocate equalization of the wealth and returning to a farming society in order to live a utopian way of simple lifestyle. You do not need to blindly pursue the so-called fair distribution and thus seriously ruin people's enthusiasm to produce and create wealth. In addition, it will never use high technology to restrict personal and intellectual freedom, will not advocate collectivism and never destroy every kind of existing social systems, production methods as well as lifestyles. More importantly, it will not harm the interest of every individual in the society. Nor it will brainwash people and worship idols or even pretend to be gods. It just uses the truth of the universe, extraterrestrial wisdom and the most advanced science and technology of the dark force of the universe to fully realize and enhance the prosperous and balanced development of material as well as spiritual life of mankind.

“TAOXINLVU TREES PEOPLE Principles of Civilization Power” is applicable to every kind of social systems in the world today: capitalist social system, socialist social system, social system

of constitutional monarchy and religious constitutional monarchy system. All these systems are compatible and adaptable. They have the broadest group recognition and social consensus in human nature around the world. However, based on the differences in the scientific and advanced nature of various kinds of social systems during implementing, the quality and effects will also vary after implementation.

No matter which social system of human society, “TAOXINLVU TREES PEOPLE Principles of Civilization Power” will have its corresponding methods and measures to bring a dying society and country back to life, turn dangerous into safe, ensure the peace and harmony of an entire society and to promote political economy, prosperity and stable development. Ultimately, it leads to the society being well governed while the government simply needs not do anything. Having just laid the foundation in one time and it can ensure long-term stability. Every country will then enjoy peace and develop prosperously.

All the methods and measures of “TAOXINLVU TREES PEOPLE Principles of Civilization Power” are based on all sorts of political systems, with scientific concepts, a construction attitude, and long-term sustainable development as the goal to consolidate, develop and improve the civilization standard of human society and improve the material living standard as well as spiritual living standard of mankind. In addition, to enhance the freedom, happiness and fulfillment index of every individual to a great extent and scale, and to truly ensure that physically humans will never be lacking wealth,

and spiritually never lack morality as well as happiness. Ultimately, it leads human society to truly enter the sensational era of peace and health.

"TAOXINLVU TREES PEOPLE Principles of Civilization Power" is not the general logical rigorous and profound social science philosophical theories in the past. Instead, it is a practical solution with absolutely detailed scientific discussion. The blueprint is based on the theory of the true meaning of the universe. It possesses the broadest social recognition as well as the basis of mass ideas, and can achieve universal unity in the consensus of opinions of people from all walks of life.

The project of "TAOXINLVU TREES PEOPLE Principles of Civilized Power" is easy to operate and quick to start. It contains the characteristics of short project construction period and can be applied to countries with different kind of social systems. It can be prepared in one year, learnt and digested in two years, constructed successfully in three years, achieving the initial result of narrowing the gap between the rich and the poor in four years and achieved the significant result in five years. In just ten years, the society can achieve the balanced development of material life and spiritual civilization. The project will be finalized in twenty years and the world's civilization greatly achieved in thirty years, which will drastically improve the level of morality and civilization of the world's mankind, guarantee the long-term stability of human society and every country achieves long-lasting peace and prosperity.

While this humanistic project greatly enhances the material and spiritual wealth of society, it can also swiftly change the social and natural ecological environment, and rapidly reduce the ecological crisis brought to the earth by the deterioration of the world's climate today.

If the whole world adopts this theory, the forests in the world will be covered with 100 billion more trees every year, and 3 trillion more trees can be added in thirty years. The species and number of wild animals and plants will be increased tenfold on earth. And it can also greatly improve the conditions of natural circulation of the organic energy of the world's wind, fire, water and soil. By that time, humans can easily get everything they want. And the sun will be warmer, the air fresher, the rivers more clearer, the soil more fertile, plants more stronger, more abundant products, and the world's climate and environment become more pleasant and more suitable for humans to live a happy life.

This extraordinarily sacred project is the gospel of civilization passed by God to mankind. It is a miracle project that has never existed before in human history. And it is an automatic and systematic engineering that naturally connects the entire social, political, economic, social moral ecology as well as the world's natural environmental ecology. It possesses the incredible energy that can turn a society into a wonderful place.

"TAOXINLVU TREES PEOPLE Principles of Civilization Power" does not require a single soldier or national financial reserve. It even can effectively alleviate the heavy mental pressure of leaders

and politicians in the world for attending tons of affairs every day. The society can be governed effectively by the government not doing anything, war is not necessary while the country becomes prosperous, humans no longer have to confront with the threat of wars, no more fighting and no more lives need to be sacrificed while the country flourishes. Problems of the politicians are solved. Leaders of every country work smoothly and govern the country with ease. The well-being of people is ensured. They are content with their life. Also, the country and the society, like an intelligent automobile, speedily and effectively travel across mountains and ridges, bridges and seas, states and provinces and ultimately reach the highest goal of civilization development of human society.

No matter what kind of social ideology the human world is in, this project will have a broad mass base and beyond imagination when implementing, and possess practical function of promoting the progress of social civilization as well as social harmony.

“TAOXINLVU TREES PEOPLE” will not overthrow and break the old world by means of angry emotions and methods, like the materialists in the past, and then employ some stupid methods like violent struggle to build a whole new world with subjective imagination. Nor will it be like the spiritual opium anesthesia of social nihilism used by idealists today, which allows people to escape from the world and real life, and waste their valuable life in the course of so-called human epiphany, fantasy speculation, emptiness and the times of feeling negative and sorrowful.

All the knowledge and theory foundation of “TAOXINLVU TREES PEOPLE Principles of Civilization Power” originates from the thinking of the true meaning of the universe. They come from three monographs, namely: The Truth, The Awakening and The Moral. They are the theory foundation, the source of knowledge as well as the soul mentor of “TAOXINLVU TREES PEOPLE Principles of Civilization Power”.

To realize this sacred and magnificent goal, the only thing that humans should firmly believe is to recognize that the Creator exists in the universe and everything in the universe is the masterpiece of the Creator. “TAOXINLVU TREES PEOPLE Principles of Civilization Power” has gained the source code for the soul of civilization progress of human society and the driving code for the survival of healthy civilization from the Creator.

The ultimate implementation of “TAOXINLVU TREES PEOPLE Principles of Civilization Power” can guarantee that the poor in the world are never short of money; the thugs in the world maintain moral standard; guarantee the fools in the world never short of wisdom; the world’s competent people never short of reputation; the world’s powerful people never short of important positions; guarantee the balanced relations between the world’s productivity and production; guarantee the long-term prosperity and stability of the world’s politics and economy; guarantee the excellent environment and ecology of the earth and mankind; guarantee the harmony and win-win situation of the plants, animals and people in the world. From now on, the world’s human society becomes orderly

and peaceful. It is well governed while not much has been done. From now on, the world's human society has become harmonious, peaceful and wonderful. From now on, the world's human society has entered the era of rotating civilization.

The ruling classes of the world, religious leaders and elites from all walks of life, please briefly stop your hurried pace, put your work aside, open up your mind, eliminate the differences of racial classes, break the prejudice of school of knowledge and culture, and listen to the voice of the Creator from the universe. Science and technology are not omnipotent, and they are not the panacea for human soul and morality. Science and technology are only the important tools to improve the production life of human beings. They are not the whole part of human life. Human beings have a more pure and nice spirit to pursue.

The beautifully spiritual world of mankind in the future is more about sublimation from pursuing spiritual morality, more about making progress from continuously pursuing the truth and the spiritual life that improve and enrich human nature. And from eliminating evil and retaining good, from eliminating false and retaining true, from eliminating inferior and retaining superior, the civilization of mankind will then reach its climax.

Since ancient times, the progress of civilization of human society has always started with religious reforms. It is the case in ancient times, in medieval times, in modern times, and will also be the case in future.....

The hope of the world is on your shoulder

The future of mankind is inside your heart

Please believe that God is blessing those who are compassionate and grateful.

Please believe that God's salvation has its superb wisdom and power.

Enthusiastically welcome academic and research institutions, think tanks and professionals from around the world to communicate and discuss. Let's join hands together and work hard to create a better future for mankind.

Introduction

The essence of all life in the universe is perfect
The essence of the world that humans live is also perfect

What is imperfect for humans is their own cognitive consciousness.

When humans are imperfect, they will turn inaction into aggressively trying to accomplish everything.

Because humans are aggressively trying to accomplish everything, the world becomes imperfect.

If humans want the world to be perfect, they must stop doing anything.

From physical body to the internal organs, humans are indeed wonderful.

From the inner soul to mentality, humans are meticulous in thinking.

Humans' imperfect perception of the universe affects our world view.

Owing to incorrect world view, humans become active and acting recklessly.

Imperfection is a blind spot caused by our limited knowledge of the world.

What we have in mind about the world helps create an imperfect world.

If we can see the world with the world view of the true meaning of yin yin yun li.

The world view of humans will become perfect. And only then will humans change from aggressively doing everything to not to do anything.

The core of the principle among everything in the world is the same.

What makes it different is their physical image and appearance.

The law of operation of everything in the world is so exquisite.

It's just like we stare at the fast-moving mechanical bearing.

The round, full, strong and powerful ball moves on the track of stainless steel in an orderly manner.

However, if anyone knows the axle steel ball that slides perfectly and pleasantly.

Can have such a huge energy to give impetus to an enormous force.

Those wonderful little rolling balls are constantly changing the world.

They are the shimmering motions of tiny planets in our vast and infinite universe.

Those bright, dazzling and shiny beads have achieved the cosmic celestial movement.

We stare at them as if there is no track, but actually tracks are there and they move in an orderly manner inside a circle.

Those orderly tracks that cannot be seen are the blind spot of our mentality and cognition.

The reason for the blind spot is that our cognition is inherited from the established concepts of our ancestors.

Under the conditions at that time, due to historical limitations as well as limited knowledge, it made human lack of cognition of themselves.

This is the historical factor that science was born and developed from theology.

This is the reason why scientists and theologians come from the yin and yang of a living body. Theologians live above scientists while scientists live inside the building of theologians.

The development of civilization in human society keeps improving by constantly eliminating the bad elements and retaining the good ones, eliminating the ugliness and retaining the beauty, eliminating the wickedness and retaining the kindness, eliminating the fake and retaining the truth and eliminating the inferiority and retaining the superiority.

In human history, every generation has its own treasure in knowledge, and every generation has its own blind spot in cognition. The source and dissemination of knowledge in human society all relies on this generation passing on to the next generation. It contains the essence after time has settled, and it also contains the dross that after time has settled.

Every generation will retain the essence and eliminate the dross of ancestors' knowledge through learning and practicing. After that, the generation will re-develop and make themselves more purify to approach the true meaning of the universe that belongs to contemporary intellectual property rights.

The evolution of the composition and motion of life in the universe can be so large that there are no boundaries while the cell tissue of life in the universe is so small that it has no boundaries. No matter how complex the composition of life in the universe is, the track of motion of life is the same. They all carry out regular cosmic rotating movement under the electromagnetic force and gravitation in the universe. Despite all life in the universe is different in terms of appearance and style, but the theory of composition and operation among life is the same. They all have the cosmic combination of yin and yang. This is the principle of life that exists in the universe.

This is the greatest law and greatest morality under the stars of the universe. This is the source and ethics of the greatest principle.

The movement of the path of life of everything in the universe is the same as the movement of the cosmos. It manages to rotate around the core magnetic field, but at the same time it also has its own life rotation. The growth of everything in the world has its own natural ecological habits, never aggressively trying to intervene; simply not to do anything is far better than ambitiously doing anything.

A newly born baby will cry instantly and knows he needs to eat right after he is born. And he also knows when he should turn

around, to sit, to crawl, to walk and to run. These are all basic instincts and inborn. Parents are not necessarily required to do anything. They will only cause troubles if they are trying to help.

Our understanding of everything in the world has caused our illusion and misunderstanding of the true meaning of everything in the universe

That's why we subjectively think everything in the universe is not perfect.

That's why we subjectively think the human world is not perfect.

That's why we think the harder it is to get something, the harder it will be to pay the price. Actually, this concept is wrong.

If our ancestors created the future with this concept, there is no future at all.

The development and progress of human material culture does not require blind hard work and sacrifice, but to worship theology with a kind and compassionate heart, and gain wisdom and enlightenment from gods. With the enlightenment of wisdom, the science and technology in the world will be readily available. With the rapid progress of science and technology and the change of labour productivity, human beings can literally get whatever they want by that time.

The only driving force for the development of material life and spiritual civilization of human society is materially to vigorously develop science and technology, and spiritually to vigorously promote the thinking of the true meaning of yin yun. In terms of material wealth, the people are guaranteed that they will never be

short of wealth in material life, and in terms of spiritual wealth, the people will never be lacking of morality, and the balance between yin and yang is coordinated.

Human beings in the future world will possess morality, wealth and intelligence. Until that time, bad people will be decreasing in the world day by day, poor people will be getting rid of poverty day by day, able people will be increasing day by day, powerful people will be becoming satisfied day by day, stupid people will be becoming wiser day by day, and eventually it will achieve the miracle that bad people no longer lack of morality, poor people are no longer poor, able people are no longer scarce, powerful people are no longer doing whatever they want, and fools are no longer foolish.

Until then, everyone in the society will live in harmony and people will love each other. Nations co-exist with peace and harmony. Money originally used in maintaining stability, governing, expanding armaments and preparing warfare will be used to developing people's livelihood instead. Under this circumstance, people will naturally become rich, and no more people will starve to death.

The world will naturally return to the rotating civilization in the universe. Humans will then naturally live the life of Messiah. Everything enters into the track of the universe, and human beings will then naturally breathe with all things in the universe. They share the same destiny. This is the profound meaning of the track of the universe.

Human cognition determines the direction and path of life;

Human cognition determines the wisdom and technology of mankind;

Human cognition determines the fate, blessings and curses of mankind;

Human cognition determines the conception and values of mankind.

The cognition of the thinking of yin yin yun li ci tuan is the cognition of the true meaning of the universe.

Human's understanding of the true meaning of the universe is the guarantee of life in heaven on earth.

Author's new preface

Innovation is the best way for mankind to understand the universe

Perfection is the best way of thinking for mankind to understand everything in the universe

Innovation is for mankind to turn everything impossible into possible.

Turn fantasy into reality, and turn ignorant into knowledgeable.

It is because humans will always turn 1% of hope into 99% of effort. That's why we achieve significant results on the road of innovation today. That's why we can have cars, aircrafts, atomic bombs and information industry today.

If we put the effort we achieved in technology into the scope of social science, the future of mankind would be more brilliant and splendid.

It is because science is to give you fish, while social science is to teach you how to fish.

If the power of science is the light of the moon, the power of social science must be the energy of the sun.

Science can change the world, while social science can change humanity.

Science needs to replace generation with next generation, but when it comes to social science, this generation must surely be better than the previous one.

Good social science is to shape human nature. Good social science can help a government govern with simply not doing anything.

Good social science can let you have a big payoff for just making a small effort, when it comes to the usage of material wealth.

It can save a lot of people's wealth for the country, and let the society be more fair and just.

Humans to reduce the budget of firearms and cannonballs, relieve the burden of military service, and eliminate the threat of war.

The nature of the universe is perfect while human perception is imperfect.

Because we are ignorant about the universe, we become immoral. Because we are immoral, we lack wisdom. And because we lack wisdom, we lack a thorough and complete understanding of the universe, only self-proclaiming that the universe is not perfect.

Humans desire to change the world and nature with the state of mind that the universe is not perfect. In doing so, you can only get half the results with twice the effort, just like sailing against the current, paying huge effort but only achieving little results. This situation only consolidates human conception that the universe is not perfect. As human misunderstanding deepened, their incorrect concept only getting stronger and stronger: everything in the

universe is not perfect. They are merciless and cold. If humans want to make their life more beautiful, they need to change the universe and conquer the nature. With this idea in mind, they take fighting, violent conflicts and wars for granted because both sides bear a mutual concept: everything in the universe is not perfect and so do humans. If we want perfection, we have to fight and only one of us can survive. Either you lose or I win. Actually, this concept of the universe is completely wrong.

Everything in the universe is perfect. It is because the universe is merciful and kind. It is because the physical phenomena and the principles of chemical changes of the universe is yin yin yun li ci tuan.

The universe moves naturally, everything grows naturally, different season comes and goes. The sun rises and sets on time every day. The moon waxes and wanes in regular cycle. Mountain ranges stand above the sea level, rivers flowing downstream. Do you ever see them take the initiative to make changes? Grasses grow and wither in accordance with different season. Trees follow the tree ring to grow. The lushness of a forest decides the number of the herbs of animals. And the nutrients in water can decide the number of aquatic lives it nourishes, like fish, shrimps and crabs.

Everything in the universe lives in accordance with the principle of nature. Only humans are the exception. We always love flattering ourselves and considering ourselves way too smart. We always want to achieve something instead of doing nothing. On the contrary, we act according to our own wishes and it leads us to a dead-end.

The so-called hardships and suffering are just the results of being ignorant and lack of virtue.

Humans are one of the members in the universe. We should respect heaven and earth and follow the laws of nature, like everything in the universe does. However, humans are too ambitious. We misbehave and act recklessly, disregard the principle of the universe. For thousands of years we see the false as the truth, see something ugly as beautiful, see bogus as divine and take the bad guys as our father. During the process, we experienced hardships, tasted all the sufferings, suffered all the tortures, and saw the ugliness of human nature. It made us come to realize that human soul is indeed evil.

This is all our mistakes in cognition. This is all because we have wrong values, and it causes us to be the enemy of heaven and earth, to be the enemy of everything, to be the enemy of humans and eventually destroys ourselves.....

The universe is perfect. The universe is merciful. The universe is compassionate. Just like human beings, all life in the universe also possesses a pure and innocent heart. If the universe does not have mercy, it has no magnetic field.

If the universe does not have mercy, it won't have gravity. If the universe does not have virtue, it won't have the form of all the living species. If the universe does not have yin yin yun li, it does not have everything in motion. If the universe does not have ci tuan, it won't have cell tissue. And it won't have God particle.

The universe is perfect. It is our ideology that is not perfect. It is

time for the humans to wake up. We can no longer survive under the guidance of misguided ideas.

The gospel that God blessing humans has long been blowing, but humans just pretend to be deaf and mute. They arrogantly keep fighting in the struggle among material, wealth and the game of power.....

When it comes to the knowledge of the universe, it does not have different kinds of subjects. When talking about the knowledge of the universe, there is only yin and yang in Tai Chi knowledge. The subject of yang represents science while the subject of yin represents theology. The subject of yang brings us technology and serves for the health of humans. The subject of yin is theology. It teaches us moral concept and serves for the mental health of humans. The combination of the subjects of yin and yang is the true meaning of the universe. It is the root of the knowledge of everything in the universe. It is the source of all the knowledge.

The knowledge of the universe is like a tree of wisdom. It contains the root, the trunk, the branches, the leaves as well as the flowers of the knowledge. And it will bear the fruit of knowledge.

All subjects related to knowledge were all our ancestors based on their limited knowledge of the universe and to subjectively classify their knowledge into different categories. With human knowledge and wisdom have been improving, they can easily get rid of the false elements and retain the truth and merge the knowledge with the same category. And from following the vine of knowledge, humans can manage to trace the root and source of knowledge.

The universe is actually very simple, because it only has 123, 123, 321. To reverse 3 and 1 is Tai Chi. One yin two yang and three is chi. Tai Chi is also called Tai yi. Everything integrates into one single entity. Every different kinds of knowledge merge into single knowledge. The evolution of the composition and motion of life in the universe can be so large that there are no boundaries while the cell tissue of life in the universe is so small that it has no boundaries. To summarize it, the pole of yang is yin yin yun li ci tuan and the pole of yin is merciful, kind and morally good. This is the golden rule of tai yi yin yun. This is the root and origin of everything in the universe.

Author's Preface

The primary purpose of the education of human society is to turn illiterate people into literate people, and transform immoral people into moral people.

In a modern civilized society, the morality of the individual has a bearing on civilization and the management cost of society, as well as the happiness index of all members of society.

The good morality of humans is the basis for the progress of social civilization and the only guarantee of stability, harmony and development in a virtuous circle throughout all of society.

The root cause of the moral insufficiency and inadequacy of humankind is to what degree an individual human understands the universe and all beings in human society, and whether that understanding is correct or not.

The level of human perception of all beings in the universe in real life decides our moral level.

Because human ignorance is the basic reason for immorality, a society with unlearned human beings cannot solve any cognitive problems through compulsory education, which cannot stand the test of practice and the challenge of science. It is like casting pearls before swine, and this has been proven thousands of times in history.

Human nature decides that truth is the most convincing,
false truth in disguise less convincing
and forced truth the least convincing.

There is also truth education implemented by intimidation with outside force and threats of enforcement, which is not convincing at all and only an anesthetic.

Human nature decides that when facing the truth, humans are willing to surrender from the bottom of their hearts, and this is very natural for them.

Human nature decides that when facing false truth, humans tend to feel confused and perplexed, and unable to distinguish right from wrong. As a result, they can only take the false as the true and compromise their true hearts.

Facing pressure and intimidation posed by authority, humans can only speak insincere words, give in by bowing and nodding, say one thing and do another, deceive themselves and behave perfunctorily.

Human education is divided into active education and passive education. Active education is the autonomous learning that arouses a strong desire for learning in humans' hearts and enables the learners to acquire the connotations of the truth in a real sense.

Passive education is the organized learning imposed by society, which fails to trigger enthusiasm for learning in people's hearts and fails to help people to acquire the truth in a real sense. Consequently, people have to pretend that they know the truth.

In the face of the truth, no matter how evil a person is, they will be convinced.

In the face of false truth, no matter how kind a person is, they will pretend to be deaf and dumb.

Confronted with violence and intimidation, no matter how weak a person is, they will be filled with righteous indignation.

There are no stereotypes for good people and bad people in the world. There are only good deeds and bad deeds done consciously or unconsciously. Human ignorance is the main reason for the selfishness, greed and immorality of mankind.

Selfishness is the root cause of all evil in human society. Only by increasing humans' perception of all beings in the universe can their selfish acts be reduced and the unrealistic environment generating immorality be destroyed.

The Truth Theory is an important constituent of the development of the advanced civilization of human society in the future, the only theoretical tool that elevates humans from ignorant to learned, and the only magic weapon that preserves humans' high virtue and purity.

Table of Contents

Getting started	4
Introduction	14
Author's new preface	21
Author's Preface	27

PART 1 About the Truth

Humans will usher in a brilliant new civilization in history.	38
A Great Era of Eternal Life will come.	45
A Sketch of Truth Theory	49
The Truth Theory	52
The Shape of Cosmic Space	61
The attractive force between Yin and Yun is the source of all life in the universe.	64
How does the Yin and Yun force bring forth all living things	73
The universe is a life body of organic movement within multidimensional space.	79
The Laws of the Universe with its Emptiness that Knows No Bounds	83
Words of Wisdom for the Universe	87
The Dark Matter and Dark Energy of the Universe are the Reality of the Activities of the Mercy Corp of Yin and Yun in Earth's Civilization	90
Unity of Yin and Yang, Unity of Life and Death, Unity of Heaven and the Earth	97
Yin and Yun created the universe.	101
All Living Things on the Earth Come from the Life of the Mercy Corps of the Cosmic Yin-Yun Energy	103
The Universe is a Panoramic Stereo Holographic Life Mutual Induction Network	107
The Universe Evolution Process Miniatured in Humans' Own Life	115
A complete human lifecycle is divided into 12 stages	120

The External Manifestation of Cosmic Living matter is the Barometer of the Inner Nature of Cosmic Life	122
Different Poses and Expressions are the Panoramic Stereo Reality of All Physical Lives in the Universe	133
The birth and growth of all kinds of new life in the universe is based on the granting and giving of the death and terminus of old life in the universe	141
The dual aspects of the Yin and Yang of cosmic matter is the reality of cosmic matter in the real world.	144
The sacred meaning of the number 9 in all living things in the universe	147
The magic and mystery of numbers on the Earth are the wonder of the Creator's hands.	151
Following the Right Way of the Universe is the Sacred Law of All Living Things	154
All Cosmic Life Matter Radiates the Sacred Brilliance of Mercy in the Movement of the Mercy Corp of Cosmic Yin-Yun Energy	159
All Living Things are the Crystallization of Virtue in the Universe	170
The Life Form of "Virtue of Yin-Yun"	173
The Sun is the true representative on Earth of the dark energy of the former universe.	
Water is the true representative on Earth of the dark matter of the former universe.	176
The Origin of All Living Things in the Universe and Reciprocating Life Characteristics	178
The Origin, Growth, Termination and Reincarnation of All Living Things in the Universe	180
All things under Heaven have their own ways.	185
The four seasons alternate in turn on the Earth, which is the visible life manifestation of cosmic dark matter on the Earth.	188
The Great Way of Gods, The Great Way of humans, The Great Way of animals	191
All things in the universe have their origins.	193
The high or low, good or evil of all creatures in the universe is the result of teaching; the fruit of cultivation; and the origin of ritual.	195
Blessings befall all living things in the universe because of their virtue. Bad luck befalls them because of their flawed virtue.	198
The Truth about All Things and Beings in the Universe	201

PART 2 About the Realness

The Origin of Human Life	205
The Small Planet, an Element of the Universe	209
The Divine Covenant between the Universe and Life	215
The Human Life Cycle of Conception, Birth, Growth, Death and Return	217
Discussion of the Holographic Integration of Human Life	228
On the Life State of the Human Soul After Death	233
The natural demise of life is the specific embodiment of the infinite mercy of the universe.	237
The Universe - Mystery of Human Life	239
The Yin and Yang dipole world of human life is the true existence of the holographic integration of human life.	246
Vulgarity and elegance are the common features of all organisms in the universe.	252
The mercy corps of Yin and Yun energy is the eternal force of human civilization and progress.	254
The Law of Changes in the Long Historical Evolution of Human Beings	257
For all things in the universe, helping people to succeed, getting things done, making things work, and helping life to grow is the only law of the universe in creating life.	261
Life is eternal. Spirit is eternal.	268
From past to present, the source of all chaos and trouble in human society is the result of the imbalance between Yin and Yang. Due to the Immortality of Life	271
The Digits from 1 to 10 in the Universe Contain the Physiological Structures of Human Appearance The triangle structure stands for the life presentation when all living things are motionless. The transformation from triangle to spiral and to ellipse is the reality of life moving from low velocity to high speed.	273
All physical structures of the human body are mysterious and exquisite designs based on the environment of the earth itself.	276

Part I
About the Truth

Humans will usher in a brilliant new civilization in history.

What humans fear most is death, because death means being lonely, saying goodbye to dear ones and going to an alien world of misery, loneliness and panicking neighbors. Death means being abandoned and ceasing to be human. Therefore, the people of this world fear death and none of them want to or would dare to die. Death has become the most painful, saddest and most desperate event in a person's whole life. Among the Chinese, the saying goes that to live is better than to die. What on earth do we live for? To most people, it seems that to live is for delicious food, beautiful clothes, cozy houses, fun and pleasure; to most people, the purpose of life is to get the most pleasure; driven by their strong desire for the material, it is to enjoy the pleasure brought by money and all kinds of excitement brought by a dazzling material life; It seems that they just live in this moment and don't care about tomorrow, the future or their offspring. They just think that with one day passing, one day is spent.

For thousands of years, humans have done many ugly things in the pursuit of material possessions, and it remains the same today. We show no remorse and don't feel ashamed at all. We just make things worse day by day. We not only completely shirk our primary responsibility of redemption as sinners of the universe, but also go

farther and farther down the path of evil. Consequently, the beautiful home, the gift from the cosmic god, has become an unpleasant mess filled with dirty water and sewage sludge. The social morals of the whole world are degrading day by day. People are greedy and selfish, never hesitating to deceive one another. The morality of humans has degenerated greatly, which has given rise to more and more evil doings in society, led astray the common practices of society, polluted people's hearts and caused serious social problems.

As a result, the rulers of all generations have to put more and more manpower and material resources into the administration of their subjects so as to constrain their behavior. As time passes, The cost will rise higher and higher. Therein, this material wealth, which is painstakingly created by humans and should be used for their life and development, has been wasted on nothing due to our own bad deeds. Just think about the huge spending of governments, armies, police, law, administrative systems, etc. of all countries throughout human history for the purpose of eliminating humans' bad deeds, punishing those who have committed wickedness and ensuring the normal and peaceful development of their countries. All this expense has been wasted and should have been originally used to improve the science and technology, welfare, health and education of the human society. The greed and selfishness of humans have caused many contradictions and conflicts between different persons, families, societies, nations and countries. Now this situation remains the same and is even deteriorating. If we develop under the guidance of such thinking, we humans will meet our doom in the near future

and destroy all beings on the earth. This is not the outcome that we are expecting, not the outcome all creatures are expecting, not the outcome alien civilizations are expecting and not the outcome the creator and God wants to see.

In the early civilization of humankind, God first guided mankind to totem worship. Then, with the development of productivity and the changes in living patterns, humans began to worship God, Allah, Buddha and the immortals. During this long time in history, humans' road to religion has never been even and smooth. It seems that humans have failed to embark on a religious road that makes all human beings under Heaven bow in worship. Thousands of years of exploration have taken us nowhere. This has resulted in the belief that good people go to Heaven and bad people go to Hell after death, as well as making people believe that the gods will protect us and one will be punished for one's bad deeds. All these statements are difficult to verify which arouses people's suspicion. This is why conflicts occur incessantly between various religious schools. Up to now, all religious schools have failed to formulate a set of theories that can persuade all the people. There are no doctrines that can earn the trust of all the people. Specifically, there are no theories that have conquered the minds of the elites of all times.

For a long time, people have been taking religion with a pinch of salt and believers have been diversified in their beliefs. There have even been voices alleging that the unbelievers just lose nothing. Why don't people believe all this stuff? It's because they have doubt. Looking back over history, owing to the scientific and technological

level, as well as the limitations on knowledge, cognition and lifestyle back then, a religious mode that is more advanced and more suitable for human survival has never been developed. However, for thousands of years, all religions made truly great contributions to the progress of human history and civilization. In order to develop, religion must be passed on by humans. If the great sages and gods had not preached the gospels on a wide scale nor advocated universal love, our human civilization would be at a lower level.

Today, with the rapid development of science and technology, humans have made substantive progress in their perception of the cosmos and the human world. We humans can no longer develop religion by relying on legends and fairytales. Instead, we need a new and historic religious revolution for this mission.

The religion of the future should be able to stand the trials of science. If we don't make changes, our religion will fail to meet the needs of all the times and our preaching will achieve poor effects. If religion fails to provide convincing theories, the hearts of humans will never be satisfied and consoled; our morals and civilization will never be improved; the development of human society will seriously lose balance and the world will never have peace.

To bring blessings to humankind, to make the future of humankind brighter, and to make the souls of humankind more beautiful, let us get closer to alien civilizations and realize the great harmony of the universe. The Great Holy Lord has enlightened us again and dropped us a hint that in the process of the development of history and civilization, humans must develop religion while

keeping up with the times, and be brave enough to explore the creation of a religious road which is suitable for the survival of modern people.

That is what God will be happy to see; that is what Allah will be happy to see; that is also what the Buddha will be happy to see. For thousands of years, this has been the wish of the supreme sages and masters who have hoped to convert the people and free them from suffering.

Is there a tomorrow awaiting humans? Can humans find a path of redemption that conforms with the laws of Heaven, the Earth and mankind by employing their wisdom? Many people will shake their heads, will be disappointed and will even firmly say that this is impossible. Will it be possible in the end? It is certain that humans will find a path of self-redemption, self-restraint, self-transformation, self-improvement and self-purification, because humans are the representatives of miracle creators.

For thousands of years, in the process of self-growth, self-development and self-improvement, humans have been advancing and maturing continuously. If this were not so, how could so many great inventors and creators have sprung up like mushrooms? Consider this: if gunpowder, paper, printing and the compass had not been invented in ancient times, and if the steam engine, telephone, telegraph and electric light, as well as the airplane, automobile, Internet and solar energy, had not been invented in modern times, how could we have made such scientific and

technological achievements, and how could we live such a convenient life now?

We should have a correct and scientific understanding of humans, and a correct and scientific understanding of human nature, explore the mystery and law of human nature, seek a proper node that is truly scientific among the kaleidoscopic changes, grasp this great node and create common religious theories that are convincing to modern people, based on the law of the universe and the practice of the Great Way, to allow people to fully manifest the holy glory of human nature. By following the three 'self' principles, namely, self-pursuit, self-improvement and self-purification, and thereby realize humans' loftiest ideals in thousands of years in pursuit of the spiritual life. This is the right direction in which we humans should head. Only by taking this great step can we pursue our noble beliefs in a scientific and devout manner, get rid of fear, anguish, selfishness and greed forever, face death peacefully reduce disputes, fights, wars and racial persecution that keep increasing, keep away from endless material pursuit and enjoyment, and elevate ourselves to the pursuit of noble spiritual civilization, improve our science and technology drastically, and advance our society into an earthly paradise brimming with love, kindness, happiness and peace.

This is an unparalleled world, a world that is becoming more and more beautiful, a world that makes the living happy, enables the dying to die a peaceful death, and satisfies both the rich and the poor, and a world in which the social structure that has been around for thousands of years, and that allows able men to amass wealth and

become tycoons will make them willing to repay society without external force applied or revolutions and wars started.

Let's believe that these creators of material wealth are neither demons nor gods but just humans like the rest of us. They just change from poor to rich and vice versa. This is the basic law of human history. In the future, through introspection and reflection, humans will realize the significance of life, society and nations completely and thoroughly. Many, many people will initiatively awaken the pure love that has been asleep in their hearts for many years, and awaken the sacred wisdom that is exclusive to humans. People will be reborn, meet a brand-new self and bear a mien of nobility, kindness, fraternity, tolerance and mercy. This is a harmonious world that is filled with love and warmth, and in which all beings exist in peace and prosperity. This is a world that gives everyone a second chance and allows everyone a new start through self-redemption. This is a highly civilized society in which people help and trust one another, as well as respect and love each other. This is the truth that our ancestors have been pursuing for thousands of years. Today, our human world will step into this great brand-new era. Let's welcome the coming of the new civilization bravely and joyfully, the coming of an era of a brand-new secular civilization; that is, the era of the introspective civilization.

A Great Era of Eternal Life will come.

When it comes to the 21st century, we humans see the twilight of the new century. The three thousand-year-old pattern of human society will change drastically and remarkably.

To know these cosmos, understand the world, explore the origin of life and detect the truth of life will become cutting-edge frontiers of human development in the new era.

We are the only intelligent beings on the Earth, and we are endowed with life by the holy cosmic God. We get our bodies from our fathers' sperm and our mothers' eggs. After a pregnancy of up to ten months, a mother gives birth to a new baby. Under the thoughtful care of the parents, the baby keeps growing day by day. Our bodies carry our parents' genes from inside to outside. From the time when we begin to babble and identify things, to the time when we learn listening, speaking, reading and writing, all our parents are always the best and earliest teachers in our lives. We acquire the abilities of listening, speaking, reading and writing by learning from them. We acquire the basic and simple abilities of cognizing the world and learning the basic codes of conduct for dealing with human relations. Thus, we can say that they are our best teachers. In this important phase of our life, our parents play the most important role in the formation of our outlook on life and the world. In our

tiny bodies, we can trace the physical and spiritual genes of our parents.

As the stars change their positions and time rushes by, great humans pass down their genes from generation to generation. This is how today's civilized society, which is extensive and profound, has come into being after countless millennia of evolution.

We grow up day by day. From an infant to a child, our bodies keep growing and the vacant space of our brains gradually comes to be occupied by the contents of our family culture. Next, it is time for us to attend school. In school, we read books and learn all kinds of information, sailing across the sea of knowledge. From primary school to junior middle school, then from senior high school to university, not only do our bodies become riper and riper, but our knowledge also becomes richer and richer. The family education we receive in the early days of our life and the education we receive in school collide and become blended, which gradually gives rise to our values and outlook on the world, and lays a good foundation for us to enter society and form our independent philosophies of life.

After growing up, we plunge into society and start a new journey in life. We work hard, continue learning and strive to realize our dreams. Then we fall in love, get married and have children. Thus, a new life cycle is started. When our offspring are born, they inherit our physical and spiritual genes.

One day, we become old and come to the last days of our life. Our bodies are running out of energy and our vitality is vanishing. We are afraid and horrified. We are not willing to face this. We are

afraid of death and loneliness. We are afraid of being abandoned. We desperately hope for eternal life. But that's impossible. This is the law of life. We are desperate for spiritual consolation. When the light of our life goes out and the living talk about us, we want to be praised and hope that our spirit can last forever. We really want to pass down our spiritual genes, just as we pass down our physical genes from generation to generation. In this way, our spirit will be inherited by posterity and will live forever.

The basic wish of humans has never been satisfied over thousands of years. Humans simply die just like the light going out. Confronted with this miserable terminus, humans cease to be fearless and learn to be selfish and self-indulgent. They start to take the pursuit of material enjoyment as the goal of life. They seek money, beautiful partners and wealth, forgetting the original significance of human life as a sophisticated form of life. This has resulted in the degeneration of human morality and the corruption of social morals.

Today, humans have entered a great new century. We should build shrines to our great ancestors and forerunners with piety from the bottom of our hearts and with our blood ties as the links, to commemorate their feats, inherit their spirit, learn their manners, comfort their hearts, extoll their achievements, make our descendants proud of them and let them know that death is not terrifying because we will always be with them.

Throughout the long history of humankind, our ancestors, who lived dozens or hundreds of generations ago, left us precious

historical and cultural heritage. This is a spiritual source that will never run dry. We should inherit and develop what they left us. Our respect for the dead and our inheritance of culture will also help us realize the meaning and truth of life as modern people. We will draw on the excellent spiritual food our ancestors left us, continuously perfect our values and outlook on life and constantly improve our morality, thereby continuously purifying the social morals of all of society. In the future world, armies will gradually disappear, as will wars and criminal courts. Only moral courts will remain in society. This is the ultimate goal of humanity. A world full of universal love is a paradise on the Earth. Isn't this the Garden of Eden originally created for us by the cosmic God?

From now on, the beautiful Earth will enter a great and eternal age. The beautiful future world will be engraved on the Earth, our home forever. Who are we? Where did we come from? Where are we headed? Life will last forever. Spirit will live eternally.

A Sketch of Truth Theory

The Truth Theory refers to a natural attribute which all things embody during cosmic movement. And which features the inherent quality of the universe, that is, the attraction between Yin and Yun, the negative cosmic gas and the positive cosmic gas.

It is the natural and scientific reality of the universe. The appearance of this theory will completely shatter the barriers that have hindered human understanding of life and all things in the universe for thousands of years. It will put an end to the idealism-materialism dichotomous outlook on the world and completely terminate the theism-atheism dualistic religious concept that people have disputed for thousands of years.

It will enable humankind on Earth to see the universe in the true, clear-minded and correct manner for the first time.

It will enable humankind to explain mysterious cosmic phenomena with our acquired part of scientific knowledge about the universe in a deep and complete manner for the first time. It is also a brand-new theory promoting human exploration of the universe to a higher level and advancing further.

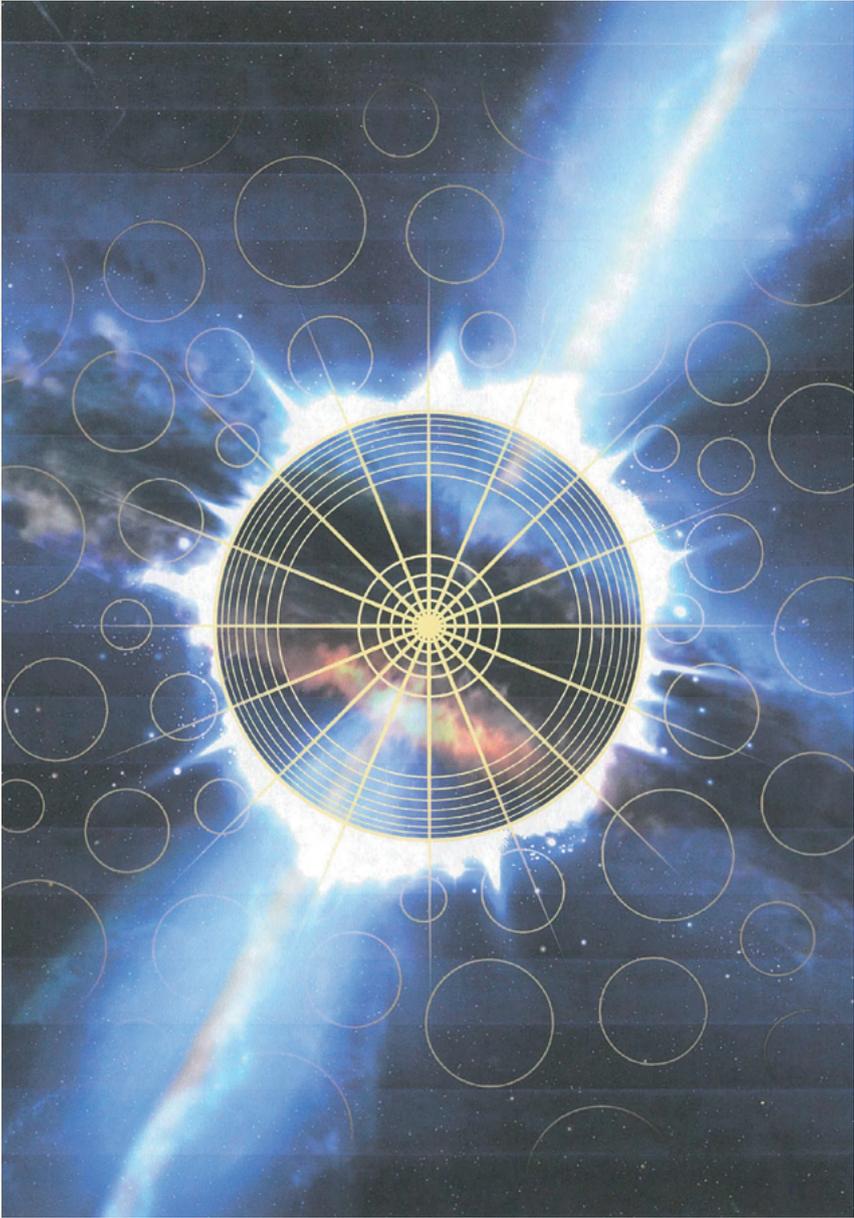

It will enable humankind to become aware of the cosmic law for the first time and it will make our cognition of the Way and ethics of the universe, which is home to humans, the Earth, the planets and all things, more comprehensive and profound.

It will allow humankind to deeply realize the meaning and value of life for the first time. It will reshape the Earth on which we live.

It will change the social structures, living styles and ideologies of all human beings, and promote human development on a more scientific and civilized track.

It will help humankind to achieve a substantial leap in morality and civilization. It will guide the development of our science and technology towards higher and farther goals. Thus, we usher in a great and unprecedented civil society that has never before existed in human history.

The Truth Theory

Since the energy generated by the chemistry between Yin and Yun, the negative and positive cosmic gases, created the galactic civilization hundreds of millions of years ago,

and since the holy lords Yin and Yun created the rebirth civilization, as well as human beings on the Earth,

Human civilization on this planet has gradually entered a brand-new era. (The years from 2012 to 2072 encompass a period of transition from the old civilization to the new civilization.)

After that, human civilization will step into a great new era and turn over a new historical chapter, ringing in a new age of secular civilization which is also called the “introspective civilization age of human religion” and the Truth Theory age in refined words.

The doctrines of the Truth Theory will incorporate the characteristics of the new human age, taking modern cosmic science as the blueprint,

the dark matter and energy in the universe, that is, the Yin-Yun energy of all things, as the soul,

the exploration of the source of human life as the form,

the improvement of materials, spirit and happiness of all mankind as the lofty ideals,

the accomplishment of the sci-tech culture and material civilization of the new era as the principle,

and the mutual love, respect, aid, peace, development, common prosperity and progress of all mankind and everything in the universe as the goal,

to finally achieve the unity of Heaven and Earth, of thousands of beings, of the old and new times, of the whole world and whole universe, and achieving the coordinated development and shared progress and prosperity of the trinity of the Heaven, Earth and humankind, the life carrier, the universe, under the guidance of the cosmic spirit.

The God of the Yin-Yun energy of the universe has always been the one and only lord of all things in the world from the beginning of time until today. He has superb wisdom and thinking, far-sighted vision and ingenious strategies. He can always formulate plain and lucid religious doctrines in conformity with the cognitive competence of humankind, and in combination with the characteristics of human life at different times to guide the mental and cultural life of humankind at different times.

In the ancient times, when human life had just started, due to our underdeveloped minds and low understanding capability, mankind had only limited cognition of nature. The God of the Yin-Yun energy established the early beliefs characterized by Heaven and Earth totem worship of mankind. By worshipping natural objects, mankind gradually grew to be capable of understanding the world correctly, whereby the spiritual needs of our ancestors in ancient times were met.

After human society entered the 1st century, mankind's wisdom and sci-tech progressed significantly. At that time, the God of the cosmic Yin-Yun energy began preaching in combination with the human development level on the Earth.

This was because the sci-tech development levels of humans in different regions were very unbalanced back then and various races lived in different parts of the world. Because of the long distances and underdeveloped transportation conditions, it was impossible for information to flow smoothly among them. The great mission of preaching made Christianity and Catholicism popular in the west, Judaism and Islamism spread in the Middle East, and Buddhism widely accepted in India, China and other eastern regions. Many other small religious schools also preached their doctrines. In fact, the preaching of all these religious doctrines was carried out in response to the will and blessing of the God of the cosmic Yin-yun energy. Despite their languages and contents being different, despite their names being diversified across various countries and regions, and despite their forms not being the same, all preaching is the angels' service to the God of the cosmic Yin-Yun energy, the propagation of love and peace, and lessons teaching the masses to pursue a lofty spiritual life.

By promoting the holy religion and spreading blessings widely, human civilization has continued to improve for thousands of years and has changed drastically.

Today, with the rapid development of human science and technology, and the globalization of human economic activities,

mankind's material and cultural life has continued improving.

The progress of human beings in the aspects of living environments, transportation conditions, information dissemination and so on has enhanced the modernization of our ideologies, living habits, civilizations and religions.

In particular, with the global popularization of information technology, although different human races and countries are thousands of miles apart, their cultural exchanges are frequent. All humans live in a big family, whether they come from the west or east, or live in the north or south, and regardless of the color of their skins or the languages they speak. All people are inseparable with “we among you” and “you among us”. We all are unique and have our own merits.

Under the current circumstances in which people are closely connected in terms of production, living and cultural exchange, all countries and nations should become united, coordinate with one another, treat one another equally and develop harmoniously, instead of fighting over historical problems, religious biases and short-term interests.

Thousands of years of human experience tells us that fighting harms both sides and peace brings benefits to both sides. After thousands of years of development, for historical reasons and various other causes, differences have occurred in such aspects as the social systems, value concepts, religious beliefs, cultural habits production capacity and so on between different countries, and this has caused a lack of communication, lack of trust, mutual suspicion and mutual

hostility between some countries, with the armament races between them continuing to intensify.

The material wealth that human beings create through hard work was originally used to improve the material and cultural life of humankind. However, now it is excessively spent in developing military force, improving military equipment and developing weapons of mass destruction. Mankind has paid a high price for this. Many people have had to abandon their affluent material life; many people have had to live a hard life without adequate food or clothing; many people have scarified their lives for this.

Today, instead of reflecting on this and establishing a new initiative, mankind is going farther and farther down the road of armament expansion and war preparations. If humankind keeps developing in this manner, our planet will be destroyed in the near future.

We don't want to see this, and neither does the God of the cosmic Yin-Yun energy.

Therefore, the God is enlightening the world once again, telling humans to stop being foolish, reflect on their deeds and make confessions and changes. Humankind must discard hatred, prejudice, selfishness, jealousy and violence. They must act in line with the Great Way of the cosmic Yin God and uphold:

consistent religions and concepts. All races around the world should learn from each other's strong points to complement their own deficiencies and help one another for mutual benefit. Only by achieving this through our efforts can the great cause of humankind

yield more results with less pain, can mankind receive happiness and can the world have peace.

Only in this way can mankind reach a future with advanced science and technology,

prosperous material and spiritual culture, and sublime and great moral beliefs.

Today, God has offered us new spiritual food and lofty beliefs; that is, the imminent propagation of the Truth Theory in a world featuring the introspective culture of humankind.

The origin of life in the universe

The mother of the universe is Yin, the negative cosmic gas,
the father of the universe is Yun, the positive cosmic gas.

The attractive force between Yin and Yun initiates endless movement.

Inside the shell of the universe, dwells a spirit, that is Yin,
inside the body of the universe, resides a soul, that is Yun.

The mother Yin and the father Yun are attracted to each other
and never separated.

The spirit Yin and the soul Yun float and drift.

Yin sparks the force of Yun and leads the movement.

Yun follows Yin and rotates around it, thus an inner core is
formed.

High-speed rotation increases the density of the gaseous mass
and it converges into a small singular point.

The singularity generates limitless power and gives birth to all
things.

All things derive from Yin and Yin is dominating.

All things originate from Yun and Yun is submissive.

Yin and Yun interact with each other and Yin and Yang exist in
harmony.

All things are in beautiful concord and the heaven and earth are
in union.

All beings are connected and a balance is achieved.

All beings exist in balance and abide by their destinies.

All things and beings are both active and passive
with the active steering the passive.

The dominating is the negative pole and the submissive is the
positive pole.

They embrace and depend on each other.

Yin and Yang mingle together to rear life.

All creatures and things submit to the same Way.

The universe bears all things and all things revere the universe.

This circle is endless, limitless and boundless.

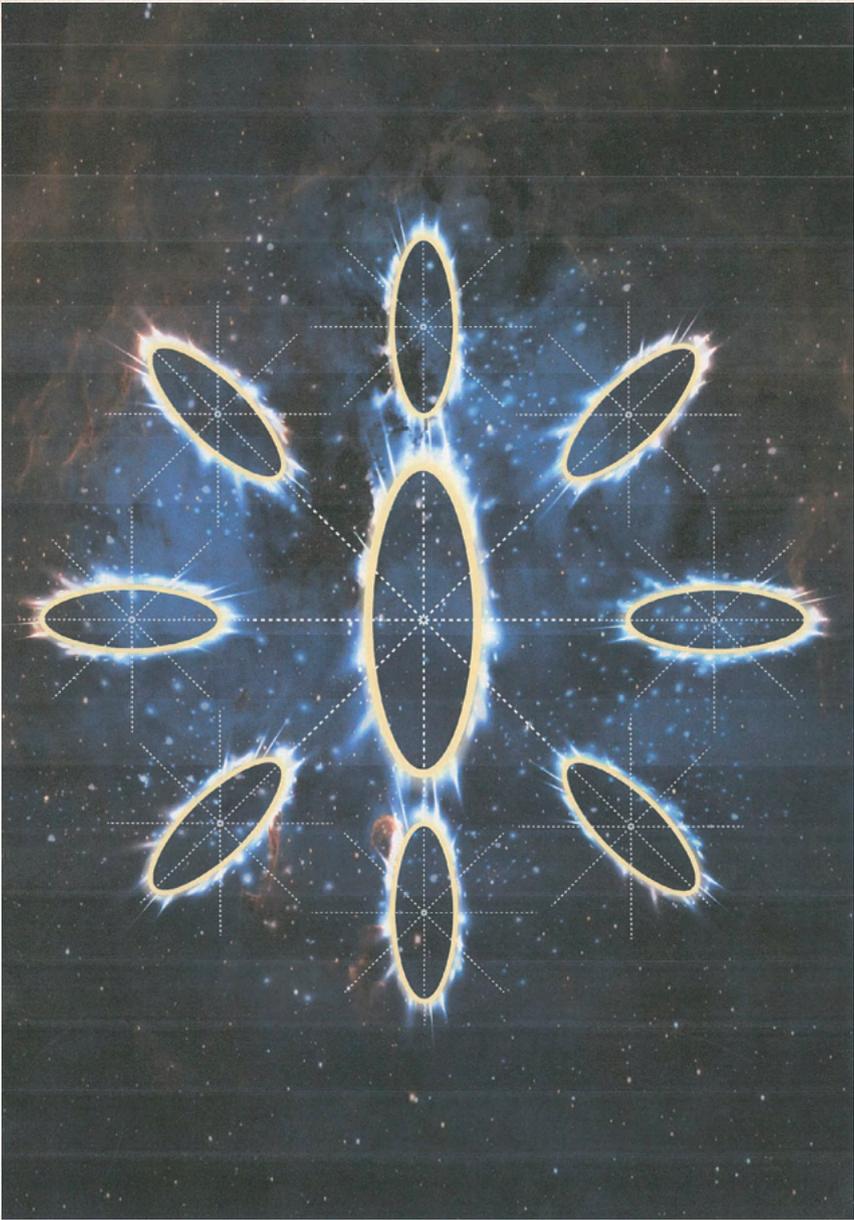

The universe undergoes billions of changes from small to big
and from simple to complex.

The universe is so vast that it knows no boundary.

Yin dominates all things and guides the movement of Yun and
they become as one.

All things follow Yin, which never ends.

All beings keep to Yun, which goes everywhere and is borderless.

The Shape of Cosmic Space

After the big bang 14 billion years ago, because of the chemistry of the Yin-Yun gaseous mass in the universe (Yin is the negative cosmic gas and Yun is the positive cosmic gas), the world that we know today gradually came into being.

In this grand and great world, and in the galaxies of the universe, billions of planets of different sizes were formed. Multi-dimensional space exists between the stars. The whole universe is divided into the 9 tiers of heaven, 27 realms and 81 dimensions of space. There are 81 positive pole doorways and 81 negative pole doorways, 162 doorways to the cosmic law. Our human perception of the world is still at the lowest level and is currently limited to 3D space. Our perception of the external cosmic environment and the vast world is still in its initial stage. Our current scientific and technological level does not allow us to gain a clear understanding of the characteristics of our human lives. Our eyes are like the light beams of torches; our cognition of the wider world is like a small circle, surrounded by darkness on four sides. We stubbornly deny the existence of what we fail to see in reality. It is just like the blind people feeling the elephant and not understanding overall. We are over-confident and conceited.

How can we know this vast and boundless world better? First, we should have the modesty to learn the correct perception of the

universe. Learn the Great Way of the universe, study the cosmic theories and obey the laws of the universe. The soul of the universe is the gravity Ci, namely the magnetic field point. Yin gives birth to Ci, that is to say, the magnetic field point turns into magnetic lines; Ci converts into Yin and Yang, from which all things spring. The gravity Yin is the doorway of the universe from whence all beings grow. The quality of Yin depends on the energy of the being it brings forth.

Kindness generates love and love generates peace; peace generates the soul, the soul generates intelligence and intelligence generates fruit (new substances)! See the attached diagrams.

The attractive force between Yin and Yun is the source of all life in the universe.

As regards how the universe comes into being, whether in ancient times or modern times, at home or abroad, from the religious circle in the past to the circle of science today, there are different conclusions. Humans understand and cognize the universe from different cognitive perspectives, and arrive at different conclusions that favor their separate value theories after research and exploration. Thus, two opposite theories are developed: theism and antitheism; in other words, idealism and materialism.

Currently, there are strong disputes over these two opposite kinds of conclusions. These two opposing theories are not supported by the majority of people and are not universally applicable.

Then how did the universe come into being? What creative power created the grand universe?

Here we will put forth our own ideas about cosmic science. We attribute the birth of the universe to a force arising from the movement of the 'Yin-Yun' perceptual field, and it is called 'Yin'. In terms of modern astronomy, it is the force of a dark matter..

It is a perceptual gravity field that is non-material and intangible, that cannot be described with accurate words, and that is unspiritual and moving at a high speed. The aim and meaning of its movement

is to produce the 'Ci' magnetic point. The movement of the Ci magnetic point then gives birth to the Ci magnetic lines. The Ci magnetic lines absorb all kinds of molecules to form the focus point. During rapid movement, the focus point is compressed into a singular point of high energy. As the speed of the movement increases, the internal space of the singular point gradually shrinks, its internal mass continuously improves and its temperature rapidly rises. During the rapid movement of the singular point, physical and chemical reactions take place. Finally, the singular point can bear this no longer, leading to the Big Bang.

With the Big Bang of the universe, billions of galaxies are born. The young galaxies rotate and move quickly, driven by the soul of the Yin-Yun gaseous mass. Thus planets of all shapes and sizes are formed, and indefinite primal cosmic force is produced.

After 14 billion years of cosmic Yin-Yun movement, evolution and expansion, the cosmic galactic civilization we see today was formed.

All substances in the cosmic galactic civilization contain the magnetic energy soul of the Yin-Yun gaseous mass. The gaseous mass converts into Yin and Yang. Through mutual interaction and movement, Yin and Yang converge into a gaseous mass of energy. In the process of this movement, the gaseous mass keeps swelling until it reaches a new saturation. Thus, new living beings are born. Then the new living beings repeat this cycle generation after generation to bring forth the new incessantly.

This is how our big world and all beings and living things are born. All living things and beings in the universe are the offspring of the cosmic Yin-Yun. The souls of all these billions and even trillions of living things are Yin and Yun. We humans are no exception.

Without Yin and Yun, all living things would lose their souls. Without Yin and Yang, all living things would lose their innate capability of bearing a life and would stop living.

No matter what changes occur to their forms, all living things have souls of Yin-Yun which are always connected with the universe. No matter how big or small these living things are, no matter how simple or complex they are, and no matter how near or far they are, a mystic connection exists between them and the universe all the time. They always love the universe, stick to the truth and follow the law of the universe. They have the greatest, holiest and most unique life attribute of the universe; that is, Yin and Yun.

The most predominant characteristics of Yin and Yun is their inclusiveness. They embrace all beings and transform all beings into Yin; Yin converts into Ci; Ci brings forth all beings. All beings generate Yin and Yang; Yin and Yang give birth to the One; the One gives birth successively to two things, three things and an indefinite number of things in an endless cycle.

Where humans have Yin and Yun, they have Yin and Yang. Where there are Yin and Yang, there is life.

Where there is life, there are men and women. There are magnetic lines between men and women. Magnetic lines generate attraction.

Attraction produces love. Love exists in the life movement. With the improvement of the quality of love, men and women become more and more intimate and they go further to sleep together. The sexual life between men and women leads to the birth of great and holy new life; that is, the offspring of humans.

We live on the Earth. The animals and plants in nature are no different from humans. In nature, if there was no such Yin and Yun that shed holy light and attract, warm and take care of living things, the beautiful and colorful world we see today would cease to exist, we humans would not be able to live such a good life and this peaceful and prosperous Earth would be found nowhere.

The Sun: The Sun is a star formed at the time of the Big Bang. The high energy field it gets from the core of the universe, driven by Yin and Yun, forms an eternally burning fireball. The Yin-Yun energy keeps burning to give the Sun dazzling light.

The Sun sheds light into the universe and keeps the world warm. This is the deep love of the Sun for all beings in the universe. The flower of this great and hot love brings great energy and warmth to all beings in the world. It is like the father of all beings. It loves and warms all things, filling them with power and making them thrive.

The Moon: The Moon hangs high in the vast sky of the universe. It caresses all beings on the Earth with its bright light beams. Its powerful magnetic lines attract the Earth closely and control the tides of the oceans on the Earth. The Moon is not only the great helmsman Of the Earth's movement, but also a courier station

from which humans can explore the universe and an information transfer station for cosmic civilizations to communicate with Earth's civilization. In the future, it will be a lodge for humans going out into the universe.

The Stars: The stars are the multitude of planets in the universe. They are the offspring of the universe. They are members of the big family of the universe, just like the Earth. They all have the Yin-Yun attribute. However, living things in alien civilizations have different living styles and life features compared with the humans of the Earth. They live in totally different life spaces compared with us humans. In the distant sky of the universe, these stars are embedded in the sky like diamonds, lighting up the universe, giving us brightness and enlightenment, and pointing out the direction for us in the long dark nights.

Wind, Lightning, Thunder and Air: Among the galaxies of the universe, the magnetic lines and radioactive rays resist and attract each other. Through the interactions between opposite forces in the sky above the Earth, chemistry is triggered by all kinds of Yin and thus wind, lightning, thunder, air and other phenomena are produced. By the action of the atmospheric pressure, Yin generates Yun, which leads to the fusion of the thunder and the air. With the lightning flashing and the thunder rumbling, water, the elixir of the universe, is produced.

Water is the source of life for all the animals and plants living on the Earth. Water is the most valuable and important basis of material life for all living things on the Earth.

Water: Water is the great source of life on Earth. It is the crystallization of the cosmic Yin and Yun, the medium of all life and the energy field of all beings on the Earth.

It is the source of kindness, the key to wisdom, the holy creator of goodness and the fountainhead of virtue in all beings.

It has a noble character. It is selfless and modest. It has enduring perseverance and unrivalled fighting capacity.

It does not claim credit for itself and has no arrogance. It desires nothing and has no regrets. It creates a clean, clear and pure land on the Earth with its peerless magic. It turns the Earth into a beautiful home full of greenery and vigor.

The Earth: The Earth is one of the numerous planets in the billions of galaxies of the vast universe. It is just like a mote of dust drifting in the universe, or a wave rolling in the ocean. In the vast universe, it looks so small. However, it is very beautiful and graceful, and its dreamy blue color and mystic shade are eye-catching and sacred.

In the universe, it shoulders the great responsibility of bearing life. It protects all living things with its broad chest. It is the home of all living things.

Its every bone (the mountains),
every inch of flesh (the land),
every lake, river, sea and ocean (blood and veins),
and every patch of forest and grassland (hair)
are packed with cosmic Yin energy and Yun wisdom.

It offers its glory and energy selflessly with the great cosmic Yin. It desires nothing and always sticks to its original aspiration.

Humans: We live on the Earth as well as in the universe. We are all living things in the universe. Like all other beings in the universe, we are precious life created by Yin and Yun.

Each of us is a miniature cosmos which manifests the distinctive features of the universe.

We should obey the law of the universe and follow its Great Way. We should finish our journey of life with Yin and Yun as our spiritual guides. All beings have mercy on us as we have mercy on all beings.

The universe is crowded with beings that live in the Sunlight under the protection of the gods. All beings take what they need and observe good manners; all follow their own course and fulfill their own duty; all give full play to their competence and cultivate their moral virtues. All things contribute their light, heat and energy.

The Sun burns itself to light up the Earth, to provide all beings with energy and enable all things to grow.

The Moon sheds bright light beams to dispel the darkness for us.

The stars are like cosmic street lights, equipping us with wisdom and inspiration, allowing us know the direction ahead in the universe and informing all beings of the vastness of the cosmos.

Lightning and thunder spray sweet dew over the Earth, and provide the Earth with the water of life.

Water makes life possible and fills all beings with vitality.

The Earth carries all beings and provides them with a resting place.

The sky provides a space in which all beings can fly.

The ground provides a foothold for all beings to walk and run.

The high mountains provide a safeguard for all beings, securing their safety and peace.

The forest provides all beings with fresh air and oxygen.

The ocean provides all beings with water and aquatic life with a home.

Animals provide humans with nutrition, making our bodies stronger.

Plants provide food for humans, helping us to grow sturdily.

All things in the world can exert their strengths and provide energy for the others. All things follow their own course and provide shelter for the others. On the whole, all beings and things are one. This is the truth of the universe, Heaven and Earth, which is the law of all things and beings.

What about humans? What have we done for the universe?

What is the meaning of our life? Do we live just to consume the resources of the Earth while loafing away our time?

As the most advanced form of life on earth, we humans cannot be so numb. If so, we would be inferior to lowly forms of life.

If so, we would be ashamed to look into the sky and we would lower our heads to look at the ground. We would be indebted to the animals and plants.

We would be indebted to the high mountains above and the oceans below. We would be indebted to the fresh air and the clean spring.

Therefore, we should reverently repay the sky to make it bluer and clearer.

We should reverently repay the Earth to make it more fertile.

We should reverently repay the animals to make them merrier.

We should reverently repay the plants to make them more exuberant.

We should reverently repay the high mountains to make them stronger.

We should reverently repay the oceans to make them deeper.

We should reverently repay all things to make them more beautiful.

We should reverently repay the universe to make it more immense.

We should reverently repay our fellow humans to make our history more glorious.

Let's live up to the title of Masters of the Earth.

Postscript

The development of human society is an eternal topic. For several thousand years, outstanding figures, generals and ministers as well as great masters in different fields of different dynasties have been puffed with ambition and boundless pride and created world-shaking causes, making historic contributions in the development course of human society, which moved from barbarousness to civilization, from low grade to higher one, from backwardness to progress, from poverty to affluence, from desertedness to prosperity and from ancient times to modern ones.

For thousands of years, sages and scholars of the past dynasties had had a great dream: to achieve Great Harmony in the society where people are free and equal and can get an equal distribution of wealth.

To try to achieve the great goal, numerous outstanding figures and influential men spared no efforts and even lost their lives. They were capable of evoking praises and tears, but finally, most of them ended in failure because they didn't get the point owing to the wrong time or lack of convenient conditions. In the end, old dynasties were replaced by new ones, in which new classes came into being being the rich and the poor.

That was how human society moved in circles. Tempting promises became lies that let down idealists from generation to generation. With the change of feudal dynasties, humankind's hope was dashed and they became disappointed and even desperate. Similar scenes went and returned in following a circle for thousands of years, but humankind never got the key point, so their grand ideal hasn't come true by this time.

Why did thousands of years of explorations end in failure? Why couldn't humankind establish the perfect social systems?

The primary cause lies in that humankind didn't grasp the relationship between the universe, the galaxy, the earth and humans, the inherent law among all things and beings in the universe or the operation principle of the universe.

Humankind tried to transform the society on impulse. They hovered around at the crossroad of animals and humanity as for the operation of their own life entities, the significance of life and their pursuit for life.

In early period, most people treated material needs as their ultimate goal in life, ignoring or distaining spiritual pursuit, which was related to the low productivity at that time.

Lack of material basis for the maintenance of their own life and unable to survive by making use of natural resources, humankind often went off the track during social production and social reform.

Till now, humans haven't found a scientific, fair, rational and ideal social development pattern suitable for humans. Humankind still explores in darkness and wanders in confusion.

In this book, I've revealed the truth of the universe and set forth the evolution, operation and law of development of the universe, the stars, the earth, human beings and others.

I hope that we can discuss about the new development direction of future human society, try to realize the great dream hand in hand, and unite all people who believe in love, fairness and peace to make arduous efforts towards a brand new highly civilized society.

I hope that our children and future generations will stay away from poverty, ignorance, barbarousness, ugliness, selfishness and greed and live in a society of great harmony where people have morality and technology is advanced and the distribution is fair.

Let's find the principle of the universe, trace to its source and set up rules for all things on earth.

Let's say goodbye to the past and initiate peace for all ages
in the name of the benevolence of life, moral excellence of
humankind and world peace,
which is the obligatory responsibility of each one in the world.
